BASIC-ABSTRACT:

NOVELTY - Invention relates to production of bitter liqueur Livenskaya with pepper. Bitter liqueur Livenskaya with pepper has the following components. per 1000 dal: 20 000 red pepper pods for addition into bottles; 30-33 l of red pepper an aqueous-spirituous infusion of 1-st and 2-d pouring; 10-11 l of creeping thyme an aqueous-spirituous infusion of 1-st and 2-d pouring; 7-8 l of Saint- John's-wort an aqueous-spirituous infusion of 1-st and 2-d pouring; 7.5-8.5 l of cherry leaves and branches an aqueous-spirituous infusion of 1-st pouring; 7.5-8.5 l of bird cherry leaves and branches an aqueous- -spirituous infusion of 1-st pouring; 34-35 l of 65.8%-th sugar syrup and rectified ethyl alcohol of the highest purity and purified drinking water, the balance, as measured to obtain the proof 40% of ready product. Combination of used components and synergism of their effect gives weakly detectable almond tint at background of pepper taste and aroma in liqueur.

USE - Liqueur and vodka industry.ADVANTAGE - Improved quality and properties, high organoleptic indices, food and biological value, broadened assortment of bitter liqueurs. 2 tbl

## ABSTRACT:

PURPOSE: To prepare a nutritious drink having the characteristic flavor and taste of a fruit, and containing various vitamins, by growing a fruit in a bottle until the fruit becomes larger than the size of the bottle neck, separating the grown fruit from the branch, charging a drink such as liquor in the bottle while keeping the fruit therein, and sealing the bottle.

CONSTITUTION: A branch having a small fruit of the initial stage of fruiting, e.g. a lemon fruit, is inserted into a bottle, and the fruit is grown and ripen in the bottle until it becomes larger than the neck of the bottle. The ripe fruit is cut from the branch, and the bottle containing the fruit is charged with liquor such as whisky or other drinks, and sealed.

## ABSTRACT:

PROBLEM TO BE SOLVED: To contrive to increase the demand for a fruit, by raising the additional value of a fruit such as Momordica Charantia not only for food but also from a different view, as for a fruit in a bottle in which a fruit larger than its mouth is contained in the bottle or a method for producing the fruit in the bottle.

SOLUTION: A fruit 2 having a size to be passed through a mouth part 4 is inserted into a bottle 1 having the mouth part 4 smaller than its barrel part. The fruit 2 is grown in the bottle 1. After the fruit 2 is harvested in a state of the fruit 2 larger than at least the mouth part 4 of the bottle 1, a liquor or another liquid 3 is poured into the bottle 1 and the mouth part 4 is closed to give the objective fruit in the bottle.

## ABSTRACT:

PURPOSE: To prevent the discoloration of a bottled pear and to improve the commercial value of a bottled fruit, by immersing a pear in a mixed liquid obtained by adding potassium pyrosulfate to an alcohol drink at a rate within a specific range.

CONSTITUTION: A bottle C is suspended upside down to a limb B of a pear tree A directing the mouth downward. The pear fruit G grown on a twig F branched from the limb B is inserted together with the twig F into the bottle C from the mouth D directing downward. When the fruit G is ripen, it is separated from the twig F. A mixture produced by adding 0.1&sim;2.5wt% potassium pyrosulfate to an alcoholic drink is poured into the bottle C containing the pear fruit H to immerse the pear in the mixed liquid and the mouth D of the bottle C is sealed.

## ABSTRACT:

PURPOSE: To obtain the subject fruit-containing bottle having a commercial value and appreciative value as a novel souvenir and preservable in the bottle as a fruit liquor by putting a fruit or vegetable fruit into a bottle made of glass, etc., and having a mouth diameter smaller than the diameter of the fruit and the cavity diameter larger than the diameter of the mouth.

CONSTITUTION: A young fruit 6 of a fruit tree or vegetable is inserted into the cavity 2 of a transparent, translucent or colored transparent bottle 1 through the mouth 3 during the period after flowering or during the bagging period and ripened in the bottle to obtain a ripe fruit 4. The ripe fruit 4 is separated from the twig in a state held in the hollow part 2 and the bottle 1 is closed with a cap 5 to obtain the objective fruit-containing bottle. A fruit liquor can be prepared by pouring an alcoholic beverage into the fruit-containing bottle.

BASIC-ABSTRACT:

The two-part bottle comprises a top and a bottom half, secured together by a hinge and a locking screw, and with a joint between them. The bottle can be of cylindrical or barrel shape etc. and as an alternative the halves can screw together, a joint being again fitted between them.

The bottle of partic. for alcoholic drinks containing whole fruits. The design allows the fruit to be inserted before filling with alcohol and without leaving it attached to the brahc, and it can be removed undamaged afterwards.

ABSTRACTED-PUB-NO: JP 06197750A  
BASIC-ABSTRACT:

Prepn. comprises drying at least one of Japanese pears, ginseng and other fruits and plant crude drugs by hot air or vacuum drying, crushing the dried material coarsely to several mm pieces, disinfecting the crushed material thermally with high-pressure steam, drying the material again and immersing the material in alcohol to elute the extract.

USE/ADVANTAGE - The prodn. period is reduced, esp. the period of immersion of raw materials, from several years to one week.

In an example, a raw material was dried thoroughly from the crude state by hot air drying and crushed coarsely to 2-3 mm pieces. The crushed material was then disinfected thermally with high-pressure steam and deodorised. After re-drying, the material was put in a bag of nonwoven fabric in a specified amt., e.g. a tea bag. The material was then immersed in shochu (Japanese distilled liquor) of an alcohol content of 35% for one week to elute the extract, compared with 7.5-year immersion in conventional methods. The amt. of extract eluted was 1.94 w/v%, compared with 1.35 w/v% for the conventional methods.

## ABSTRACT:

PURPOSE: To give an added value to ice itself, reform a culture of drinking and contribute to a better social life, by disposing a washed and dried edible plant flower or the like in a block of ice.

CONSTITUTION: Edible cherry petals 2 are arranged in an ice block 1 made from drinking water, to stimulate the sense relating to visual appearance, a sense of play, atmosphere, etc., while maintaining the function of cooling refreshing drinks, liquors and the like. To produce the ice block 1, drinking water 6 is poured into a clean, transparent, ice-making vinyl polymer container 3. Then, a cherry blossom 7 washed appropriately (immediately after being picked), rinsed sufficiently, dehydrated and sterilized with alcohol dried in a clean oven is pierced with a pin 4, and is disposed in the container 3. The container 3 is bound up with a rubber band 5 at a binding part 8 thereof, with a part of the pin 4 protruded out of the container 3, and is placed in an icemaker to produce the ice block. Thereafter, the pin 4 is pulled out, to complete the ice block containing the cherry blossom 7.

## ABSTRACT:

CHG DATE=19990617 STATUS=O> A perfume bottle consists of at least substantially transparent material, such as glass. In the perfumed liquid (10) located therein, there is a bouquet (4) of cut flowers or a similar flower as a decorative element. The perfume bottle is thus given, on the one hand, an aesthetic, unique appearance; on the other hand, it has surprisingly been established that such bouquets (4), flowers, buds, etc., particularly if they are natural buds, keep virtually unchanged inside the perfumed liquid for many years, in particular they do not wither or disintegrate.
